DOUBLE GLASS APPLICATIONS

All processed or non-processed glasses are produced with Thiokol or silicon fillings, containing dry air between glasses, when it is double glass.

LAMINATION

Transparent and opaque PVB is placed between two or more glasses of various thickness and characteristics, and laminated under heat and temperature. Also, bulletproof laminated glasses with two or more layers are made A-™-.

TEMPER

It is a heat process to ensure that the glass is four or five times more resistant compared to normal glass.

FOLIO COATING

Folio coating is used in front of parapets, to make the reflecting glasses opaque, and to add colour to various types of glass for decoration purposes.

BONDING

Silicon filled isolation units are glued on aluminium cartridges using special structural silicones.

CONVEX GLASS

Various types of glasses can be turned into convex glasses.
