PRODUCTS OR MACHINERY

Silica Sand

Found in a number of forms, including quartz crystals, sandstone and diatomite, silica is more abundant than any other mineral on earth, according to the Minerals Zone website. The most common use of silica sand involves the manufacture of glass. Silica sand goes through a milling process producing various size granules before use in different materials and applications. Additional uses for silica sand include abrasives for sand blasting, cutting and grinding softer stones like granite, feldspar and marble. Many building materials contain various amounts of silica sand. Components for computers, televisions, radios, watches and other electronic equipment also come from silica sand.

Company Profile of **EgyptSilica Trading and Minerals Co**

A service of glasssglobal.com, an affiliate of glasssglobal group.
