SECURITY & SAFETY PERFORMANCE

VISHWA lammi architectural glass presents itself as a formidable barrier, which helps discourage break-in attempts. Ordinary glass shatters easily on impact & so offers little security against break-in attempts. Thus, safety glass is specified in potentially high-risk breakage areas & overhead or sloped glazing. In this connection more & more localities are accepting laminated glass. The adhesion of the glass to the resin interlayer provides significant resistance to glazing failures from windblown debris & causes the glass to remain integral when broken. Laminated glass thus minimizes the risk of glass fallout from accidental impact.
