PRODUCTS OR MACHINERY

UV resin is characterized by adding photo-initiators and because of this, it is extremely low in volatile organic materials (such as VOC, benzene and toluene) and environment-friendly in comparison. Also, since it yields high productivity, it is widely used in the coating and printing fields of plastic, wood, PVC, metal, and paper.

Although UV resin usage is very limited in the flat glass and mirror industry, its use may become popular in the near future from various environmental standard enhancements in the construction industry, the consumers' preferences of using environment-friendly products, and various product applications.

Company Profile of **Bestroom Co., Ltd**

A service of glasssglobal.com, an affiliate of glasssglobal group.
