PRODUCTS OR MACHINERY

Industrial up-to-date temperature measurement. Thermocouples and resistance thermometers as well as balance or thermoelectric conductors.

COMPANY BACKGROUND / HISTORY

Since 1968 we have been building electric temperature sensors. GÜNTHER GmbH Temperaturmesstechnik focused initially on providing temperature sensors to industrial furnace producers, but in a very short time we were able to offer our products to almost any other branch of industry. Today we are one of the best temperature measurement technology producers in the world.

For 40 years now we have worked on the problems of temperature measurement in the glass industry – we may now proudly say that our experience in this field is quite vast. To meet the extreme conditions required for glass production we use only highest quality materials for the construction of our thermocouples.

Over the years we have also perfected and developed the technology and techniques of production to be able to meet almost any requests of our Customers and prepare individually designed products. This and the fact that we have ensured that standard dimensions of precious metal sleeves, ceramic tubes and thermocouple cable are always in stock on site allow us to provide our Customers with many options on temperature sensors in a flexible and quick way.

A long-established certified Quality Management system and an in-house calibration laboratory allow us to ensure highest quality standards.

Of course, apart from thermocouples, we offer also purchase and exchange of precious metals – one of available options is to open an individual precious metals account.
