Automation solutions for the glass-making industry

The control system in a modern glass-making facility touches every piece of equipment and instrument in the plant. Nothing will be conveyed, classified, or pumped until the plant's control system is operationally ready. In short, control of the plant can mean the difference between profit and loss.

That's why ANDRITZ has an engineering group that focuses on the design of electrical, controls, and instrumentation systems. These disciplines typically account for a small portion of the total project budget, but their importance to the operation of a plant is paramount.

ANDRITZ structures the scope of supply to fit commercial needs, from engineering to engineering and equipment supply, to engineering, procurement, and construction. Whatever the situation, ANDRITZ has the people, the patents, and the proven tools to ensure that a plant is operationally ready.
