PRODUCTS OR MACHINERY

Our glass melting and glass conditioning technology is used to produce several types of glass:

- Container glass flint, extra flint, amber, green or colored
- Table ware glass soda lime
- Lead crystal
- Barium crystal
- Neutral glass pharmaceutical tube
- Borosilicate
- Sodium silicate
- Ceramic frit
- Glass tile

Neutral Borosilicate glass is used mainly for **pharmaceutical** applications. This kind of glass is characterized by a high content of boric anhydride and alumina, a low level of alkaline-earth oxides and an alkaline level significantly lower than the one of soda-lime glass.

Glass Service had a great and successful experience with Borosilicate furnaces projecting, installing and commissioning more than 5 furnaces in the last 4 years. Each one has demonstrated an high quality of glass production and a relevant ease-of-use in operation with furnace life higher than average.

For **tableware** production is mostly used soda lime glass, sometimes barium oxide or boron is added. Glass Service has a great experience of design and construction of furnaces for this type of production.

Gathering in this case is made either in manual way or using a robot, as well as using forehearths with feeder mechanism. So the working zone may include gathering bays, feeders, etc.

A complete production project provides a custom solution to match precisely customers requirements.

Company Profile of **Glass Service srl.**

A service of glasssglobal.com, an affiliate of glasssglobal group.
