## PRODUCTS OR MACHINERY

### Vacuum and pressure for the glass industry.

Our single-stage, circular oil lubricated rotary vane compressors are based on a proven principle whose technology is tailored for the glass industry. Rotary vane vacuum pumps are used to evacuate the glass moulds. This ensures high product quality and increasing the number of pieces per hour poses no problem.

They are the first choice for applications in which the operator places a high value on reliability, long service life and low maintenance.
