PRODUCTS OR MACHINERY

SunConnex supply a complete range of standard solar PV modules and associated specialised equipment, components and accessories required for many photovoltaic system configurations, both in grid-connected systems and offgrid applications.

We have access to direct product supply from our manufacturer partners, frequently with availability when others may have difficulty to deliver, often with access to models that have stopped production and sometimes special offers on items that are not generally available.

With the knowledge of our staff and contacts linking across the industry, we can usually offer specialised solutions "off-the-shelf" for even the most unusual requests and customised requirements. We advise on how to use the products and also provide a configuration service for the more complex components, such as inverter monitoring and communications, custom design BIPV modules or special structural designs and load calculations.

Products and component parts are of course only part of the project and we are also able to provide a complete design, engineering and management support service for delivery to our customers and partners. We do not compete with our customers. We provide services to improve your project delivery and execution.

Company Profile of **SunConnex B.V.**

A service of glasssglobal.com, an affiliate of glasssglobal group.
