Address	Komax Systems York 120 North St. York, PA, 17403
Country	USA
State	Pennsylvania

PRODUCTS OR MACHINERY

Power generation with photovoltaics (PV) involves an extensive value-added chain. First the silicon is mined and manufactured into silicon disks/wafers. Then further processing occurs to manufacture wafers and the modules themselves. Finally, these modules are integrated into high-performance PV systems. Equipment from Komax Systems is used in the assembly of solar cells, solar modules and thin-film solar modules.

At its centre of excellence in York, USA, Komax Systems has successfully produced machines for the PV industry for many years. For the tabbing and stringing processes as well as for glass lay-up applications, Komax Systems offers high-performance standard machines with extraordinarily high cycle speed. Customer-specific solutions have been created realized in the areas of screen-printing and bussing. It is important to achieve a minimal breakage rate when handling the ultra-thin and expensive cells.
