## PRODUCTS OR MACHINERY

Our primary aim is to contribute to the further decrease of the electricity generation costs of Si-based photovoltaics. In this way, we want to promote the wide-spread use of this technology.

Therefore we cooperate with leading companies and research facilities of the PV-sector.

We offer:

- Evaluation of silicon feedstock by characterisation of solar cells produced thereof with variable processing steps.
- Optimisation of existing and development of new processing steps and equipment for the industrial production of solar cells with high efficiencies.
- Development and testing of novel solar cell concepts.
- small-series production of special as well as partially-processed solar cells applying customer-defined processing steps on our processing-equipment.
- Loss-analyses of solar cells and modules
- Solar cell characterisation using our characterisation-equipment and running simulations.
- Development of new characterisation-methods and -equipment.
