## PRODUCTS OR MACHINERY

SCI Engineered Materials manufactures Superconducting and Non-Superconducting Ceramic targets for use in Sputtering and Laser Ablation systems. Our quality is unmatched in the industry and our goal is to meet customer specifications every time we go into production. We have manufactured targets up to 12" diameter and typically .125" or .25" thick, however, we are happy to review custom shapes and compositions and comment on the possibility of manufacturing. If you are new to sputtering, please stop by our Ceramic Target Break-In and Maintenance page on this site for addition information about sputtering and storage.
