PRODUCTS OR MACHINERY

Our company has developed and patented system for cooling photovoltaic plates with water flow that is based on the rainwater, which is collected in the reservoir and circulating through the system, thus cooling photovoltaic surfaces. Our system keeps the working temperatures of active photovoltaic plates on lower levels and so enables better efficiency of photovoltaic cells in hot summer sunny days. This system can also be used with existing (already operating) photovoltaic surfaces, which productivity can be raised to up to 25 %. Our company Dr. Nemo d.o.o. can build the cooling system on various photovoltaic systems, so you are kindly invited to visit us for additional information. Upon you wish we can prepare you an attractive offer that will best suit your needs.

Company Profile of **Dr. Nemo d.o.o.**

A service of glasssglobal.com, an affiliate of glasssglobal group.
