PRODUCTS OR MACHINERY

GreenPowerMonitor is the all-in-one monitoring solution for renewable energy systems. There is an ever increasing necessity to remotely control the installations, in order to follow-up their correct operation and performance, which makes it essential to have a monitoring solution in place. GreenPowerMonitor offers the entire package of independent monitoring Systems, from the best real-time remote monitoring system to the PV manager (plant maintenance software). The process of data acquisition is carried out by the DAM (Data Acquisition Module). It can gather data via sensors, or also by communicating with the different devices in the installation (inverters, meters, relays, thermal controllers, etc.). Data are transmitted automatically. From anywhere in the world, you will be able to check the status of your installation by accessing the web application offered by GreenPowerMonitor. You will be able to detect any anomaly thanks to the alarm system, via sms or email, depending on the parameters that are configured in the web application. GreenPowerMonitor offers its clients a generic brand, so that the web application can be customized with your corporate logos and colours
