PRODUCTS OR MACHINERY

PADCON GmbH (a member of the HOCH.REIN Group) specializes in developing and implementing PID solutions. Float-controller technology provides a means of both simply and effectively stopping PID on PV systems, and successfully regenerating affected modules. With the help of this know-how, the output of degraded PV systems is able to be restored to its former level.

The float-controller technology has been continuously developed since 2011. And PADCON GmbH's experience in installing over 3,000 anti-PID products has made it a market leader in this segment.
