## PRODUCTS OR MACHINERY

The Filmetrics approach was to design an affordable purpose-built miniature spectrometer system, whose low cost had just recently been made possible by advances in silicon detector array technology. We combined this with sophisticated software that integrated advanced thin-film expertise into a simple, intuitive Windows interface. The result was the F20, a compact system with astounding speed and accuracy, which line operators could be trained to use in a matter of minutes - all at a mere fraction of the cost of traditional instruments.
