## PRODUCTS OR MACHINERY

The photovoltaic amorphous silicon modules are competitive in this market thanks to a number of features that clearly enhance some of the qualities of crystalline silicon, specifically:

Their behavior to high temperatures is clearly better, their loss of performance under these conditions much lower.

They show better performance (indirect radiation, cloud cover, etc.) diffuse light and shadows.

The Installation on not oriented positions or not to the Sun direct radiation generates very high yields compared with other modules. This circumstance makes it especially recommended for installation in facades, roofs, etc. with lower cost structure.

### Company Profile of **Gadir Solar**
