PRODUCTS OR MACHINERY

TULIPPS Solar B.V. has developed its unique and patent-pending COSMOS™ solar PV module system to eliminate the cost, weight, and installation time associated with traditional PV modules that use separate glass and aluminum frames to hold solar cells during operation.

Key to the success of the COSMOS system is the combination of our:

- Uniquely designed, lightweight, frameless PV module support structure with thin glass,
- Highly integrated design features that allow for plug-n-play installation (or removal) from buildings,
- Fully recyclable, environmentally friendly/ECO compliant halogen-free flame retardant automotive-grade composites, and
- A proven roof-anchor system that does not penetrate the roof membrane.

Each component contributes special benefits to the system.

The COSMOS™ module technology will serve the following PV markets:

1. Light industrial flat or slightly sloped flat roofs of buildings
2. Pitched roofs
3. PV-T modules (PV and Thermal combined in one module)
4. BIPV applications in general
5. Exterior Wall panels
6. PV Ground Mounted systems
