Address	BDF Industries S.p.A. Head Office and Sales Department Viale dell'Industria, 40 36100 Vicenza Italy
Country	Italy
Phone	0039 0444 286100
Fax	0039 0444 286 299
Internet	www.bdf.it
Employees	200
Turnover	38.500.000,00 EURO
Year founded	1906
Export Rate	80 %
Associations	GIMAV ICE ITALIAN CHAMBER OF COMMERCE

CONTACT PERSONS

Contact 1.	Mr. Oscar Dalla Fontana CEO Phone: 0039 0444 286100 Fax: 0039 0444 286108
Contact 2.	Mr. Luciano Pontiggia Asia Pacific Sales Manager
Contact 3.	Mr. Dr. Ferdinando Dalla Fontana Sales Phone: 0039 0444 286.100
Contact 4.	Mr. Juan Suarez Technical Service Specialist Phone: +52 81 10400259

Contact 5. Ms. Eleonora Sgarzani

Contact 6. Mr. Antonio dalla Pria
Sales Asia / Middle East

Contact 7. Mr. Gianluca Cera

PRODUCTS OR MACHINERY

Gob Forming and Delivery

The molten glass flows from the melting furnace into the thermal conditioning Foreheart. Once the right thermal homogeneity and viscosity are reached, the feeder mechanism cut the string of liquid glass into gobs of the required dimension and weight. The red-hot gobs of glass (1.200° C approximately) vertically drop into the delivery system which distributes them to the various sections of the I.S. Machine.

The layout of the article (namely the definition and dimensioning of the Parison in relation to the shape of the drop and the shape of the final item) represents the basic element to calculate the production parameters necessary to the manufacturing of fine-quality glass containers.

BDF Mechanical and Servo Feeders represent a consolidated technology for the glass forming industry, capable of satisfying the most diverse requirements in terms of production and speed needs. BDF Feeders are designed to work both with small and large gobs, from 144-81 to 513-515 spouts. All parts are standardized.

BDF Servo Feeder is composed of:

- Servo Plunger Mechanism
- Servo Parallel-Shear Mechanism
- Gear Type Revolving Tube Mechanism

Besides working as a standard high-speed feeder, it allows also to produce gobs of different weight within the same production cycle.

Durability and high-speed, low operating and maintenance costs and easy approach for operators are the most important features of the BDF Feeder Systems.

Container Forming

The I.S. Machine derives its name from the English "Individual Section", which indicates that it is composed of independent sections, each one capable of performing the entire production cycle.

The independent sections allow to intervene in the machine with adjustments, repair and mould changes, avoiding to stop the entire line.

BDF's offer include 2, 6, 8, 10 and 12 sections I.S. machines. In addition to this it is also possible to combine two machines and work in tandem to enhance the production. The number of working sections can be freely varied depending on the production needs or the furnace capacity.

A complete range of mechanisms and auxiliary equipment has been developed for each type of machine (single, double, triple or quadruple gob, Blow and Blow, Press and Blow or Narrow Neck Press and Blow, Blank Vacuum process), as well as special equipment for the various production processes.

BDF I.S. Machines are designed to be highly functional not only at the mechanical components level (gob delivery, servo and pneumatic mechanisms, moulds cooling, easy mounting variable equipments, special process apparatus, ware handling), but also for what concerns the electronic control system (Integrated or stand-alone)

Main Features:

- Exact repeatability of movements
- Improvement of production process
- Increased productivity
- Reduction of defects on the finished container
- Reduction of environmental pollution
- Energy Savings

COMPANY BACKGROUND / HISTORY

With more than a-hundred years experience, BDF Group is the unique supplier able to propose a complete offer for the hollow-glass making industry: from the design and production of furnaces, forehearth and IS machines to complete turn-key plants.

BDF Glass Division aims at providing the customer with the complete selection of equipment and services which are required during the hollow-glass production process: from the melting furnace to the stacker. The Experience of the Glass Division allows BDF to assist the glass plant in:

- Designing and supplying new Furnaces, Forehearts, I.S. Machines and the related Process Control Systems
- Revamping existing plants and providing Technical Assistance
- Supporting the Customer step-by-step (training, assistance in start up and production, audit, maintenance activities, etc.)

The strong technological know-how of BDF Industries Glass Division permits also to satisfy the soaring demand of updated control systems that can cope with the growing integration and flexibility of the glass plants, and to enhance their productivity, efficiency, reliability and cost and energy savings.

BDF Industries Group enters a new era of glass production processes, characterized by the full automation and the easy management of the glass factory.
