PRODUCTS OR MACHINERY

Our products are transparent, anti-reflective coatings that render intrinsic polar surface's response non-polar (hydrophobic, superhydrophobic, superoleophobic). Through these functions our coatings diminish reflective portion of the incident light while enhancing the transmitted balance. In addition, by employing the self-cleaning effect, commonly reported in media and literature as the "Lotus effect", our products maintain and extend the cleanliness of surfaces.

Our coatings are evaluated scientifically, and their characteristics are results of direct measurements. We do not estimate, predict or employ unreliable acceleration factors to characterize our coatings. As we fully control our products functionality through structural and compositional parameters, we can tailor and customize the functionality response to meet our client's requirements.

Company Profile of **Swiss-9 GmbH**

A service of glasssglobal.com, an affiliate of glasssglobal group.
