Vuzix Designs and Manufactures Wearable Display Devices

The company is engaged in the design, manufacture, marketing and sale of wearable display devices. These devices are worn like eyeglasses and feature built-in video screens that enable the user to view and interact with video and digital content, including movies, video games, computer data and the Internet.

Our wearable display products are known commercially as Smart and Augmented Reality Glasses, Video iWear (Eyewear), head mounted displays or HMDs. These products are capable of providing virtual, large high-resolution screens and yet they can fit in a user's pocket or purse and can be viewed practically anywhere, anytime. Vuzix devices can also be used for augmented reality applications, in which the wearer has their real world view augmented with computer generated information. Our products are designed to work with mobile electronic devices, including cell phones, laptop computers, tablets, and portable media players and gaming systems.

We produce and sell two main types of wearable display products: Smart Glasses for a variety of enterprise and commercial users and applications, including AR; and Video Viewing glasses, for on-the-go users as mobile displays for entertainment and gaming. Our products are available with varying features, including with and without application running computer processors, and are offered as either monocular or binocular display systems. With its origins in defense R&D for next-generation military display solutions, Vuzix is now just focused on pursuing the enterprise and consumer markets for wearable computing and personal AR display devices.
