ClearAF

Anti-Fog Coating

Anti-Fog Coating

ClearAF is a wet-deposition, high-durability, super-hygroscopic anti-fog coating

PFAS FREE • NO FOREVER CHEMICALS •

Start Clear, Stay Clear
Fog-Free Glass That Lasts

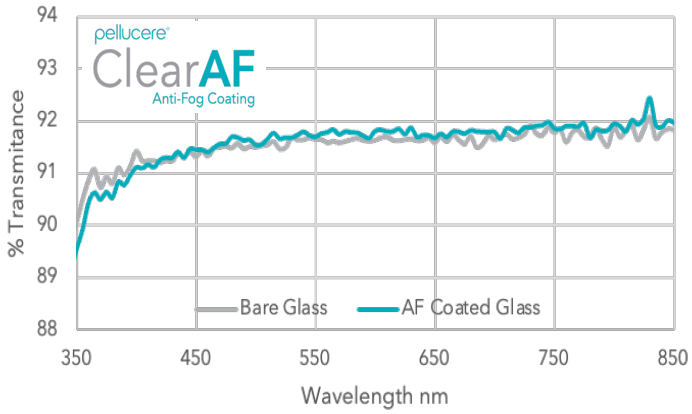
pellucere® ClearAF Anti-Fog Coating

Clarity That Lasts

Say goodbye to foggy bath mirrors. ClearAF ensures bathroom mirrors stay crystal clear. Whether in a luxury hotel, high-end spa, or a residential home, ClearAF enhances the user experience by maintaining perfect visibility.

ClearAF is designed to last *more than a decade* under normal use. The persistent anti-fog properties can be rejuvenated anytime by cleaning with standard home window cleaner.

As Clear as Glass



01 Industry-leading

Anti-Fog Performance Time to fog exceeds industry benchmark ISO 18526-3 standard. Even after saturation, water continues to sheet and prevent fog formation.

02 High Durability

Pellucere ClearAF has been extensively tested to meet or exceed all industry standards for abrasion resistance and chemical resistance. The flexible film retains its water carrying capacity indefinitely under normal use.

03 Lower Installed Costs

Pellucere ClearAF's cost-effective wet deposition system dramatically lowers the cost of installation and significantly reduces rework and rejection rates versus polymer sheet application technologies.

04 Flexible Wet Deposition

Pellucere ClearAF goes on as a wet film using standard deposition technologies. It can be masked for spot coating and has a low curing temperature to accommodate mirrors and other sensitive substrates.

Ask US About ClearAF for Automotive

A broken seal and a humid morning is all it takes to defeat a state-of-the-art modern ADAS system. ClearAF provides a persistent, long-term anti-fog solution for vehicle cameras and optical sensors to maximize safety and reduce warranty claims.
